Professional Summary

Full Stack Developer with 3 years of hands-on experience specializing in React.js / Next.js. Proficient in building scalable, high-performance web applications with leveraging modern libraries like Material UI, Zustand, Next-PWA, etc. Experienced in designing and implementing enterprise critical applications for **container terminal** operations in **BNCT** Port, demonstrating a strong ability to deliver technical solutions for complex logistics environments in PT. Primus Indonesia.

Technical Skills

- **Languages**: JavaScript (ES6+), TypeScript, Java
- **Frameworks & Libraries**: React.js, Next.js page/app route, Vanilla JS, Material UI, Zustand, Next-PWA, React Hook Form, Nextauth, ExpressJS, jQuery
- **Tools & Platforms**: Capacitor-ionic, MQTTX, MobaXterm, Git, Vercel, Progressive Web Applications (PWA), netbeans, SPA, MongoDB, Oracle SQL Developer, Prisma
- **Other Skills**: IoT (NodeMCU Esp8266), Internet Network

Professional Experience

[PT. Primus Indonesia – IT Service Company] | [June 2022] - [Present]

Full time Staff Programmer / June 2023 - present

- Developed and maintained high-performance, scalable web applications using Next.js 13 also Java JSP and API.
- Designed and implemented a handheld system application used in container terminals, optimizing daily operations and streamlining workflows.
- Built a real-time Progressive Web Applications (PWA) VMT (Vehicle Mounted Terminal) RTG crane application to manage container organization efficiently within port terminals.
- Created a VMT truck application that facilitates seamless container transport between trucks, RTG cranes, and quay cranes, integrating real-time tally confirmations.

- Supported and maintained the applications developed, regularly updating them based on client requirements.

App-Support / April 2022 – May 2023

- Provided technical support for a car terminal operation system in a port environment in Patimban International Car Terminal , ensuring minimal downtime and smooth operations.
- Resolved software and hardware issues reported by users, utilizing remote desktop tools for efficient support.
- Collaborated with the development team to identify, document, and resolve system bugs and enhancements.

Education

S1 Teknik Informatika | Gunadarma University | 2021 – GPA 3.29

Selected Work Projects [FRONT END PROJECTS]

1. **Handheld System for Belawan International Container Terminals – Next.js 13 [SOLO PROJECT] [LIVE Production]**
    - Designed to manage container processes, including **discharge, loading, stacking/unstacking, and shifting** operations.
    - Implemented a clean, intuitive UI using Material UI for seamless user interaction.
2. **VMT (Vehicle Mounted Terminal) RTG Crane and Reach Stacker Application – Next.js 13 [SOLO PROJECT] [LIVE Production]**
    - Built a NextJs application for RTG crane operators, improving container organization efficiency within terminals.
    - Developed a robust PWA to streamline container terminal operations with real-time updates.
    - Designed to manage container processes, including **discharge, loading, stacking/unstacking, and shifting** operations.
    - Integrated real-time MQTT client for live data tracking and communication.

3. **VMT Truck Application – Next.js 13 [SOLO PROJECT] [LIVE Production]**
    - Designed and deployed app for managing internal truck operations, coordinating container transfer between trucks, RTG cranes, and quay cranes.
    - Ensured reliable API communication and implemented a tally confirmation process for accurate tracking.
    - Integrated real-time MQTT client for live data tracking and communication.

4. **KPI Dashboard Application – Next.js 13 [SOLO PROJECT] [LIVE Production]**

- Developed a real-time KPI dashboard application designed for container port operations in BNCT port Terminal-B, inspired by TOPX TOPS-KPI.
- Dashboard provides operational visibility into terminal activities, including berth, yard, and gate operations.
- live metrics and performance indicators for monitoring equipment efficiency, container movements, and terminal throughput.

5. **Depot Container Application – Next.js 13** [Team PROJECT] [LIVE Production]

    - Designed and implemented interactive dashboard to display real-time container activity, stock position, and yard status.
    - Developed automatic yard filter system to determine available yard slots based on container size, block, row, tier, and stacking rules.

6. **PLB (Pusat Logistik Berikat) Bonded Logistics Center Application – Java JSP / Vanilla JS** [SOLO PROJECT]

    - Developed an application to optimize and manage bonded logistics processes within bonded warehouses.
    - Implemented features for inventory container real-time tracking, ensuring compliance with regulatory requirements.
    - Designed workflows for goods clearance, customs documentation, and warehouse movement approvals.
    - Integrated analytics for tracking inventory status and warehouse operations in real-time.

7. **PLP (Pindah Lokasi Penimbunan) Application – Java JSP / Vanilla JS** [SOLO PROJECT]

    - Built an application to manage the relocation of bonded logistics warehouses efficiently to other warehouse locations.
    - Created the process of approval, tracking, and documentation required for warehouse movements.
    - Enhanced user experience with a responsive UI and real-time notifications for status updates.

[Full Stack PROJECTS]

1. **WEBACCESS TPKS (Terminal Petikemas Semarang) web conversion – Java 21** [Team PROJECT] [Still Develop]
    - Designed to manage Container Terminal processes, document, monitoring and report, including **discharge, loading, stacking/unstacking, and shifting** user web portal operation.
    - Developed web-based system to replace legacy desktop application for container terminal operations.

2. **WMS (Warehouse Management System) for KBN Application – Java 21 [Team PROJECT] [LIVE Production]**
    - Built reporting module for Dashboard, warehouse activity, stock balance, and transaction history.

Personal Attributes

- Strong problem-solving and analytical skills.
- Excellent communication and teamwork abilities.
- Proficient in English, ensuring clear and effective collaboration in international teams.
- Highly skilled at crafting ChatGPT prompts and efficiently searching for solutions to technical issues on the internet and forums.
- Passionate about learning new technologies and improving code quality.
